Dr. Nidhi Jain
Professor

To Whomsoever It May Concern

Aadvwaya Passi from Shri Ram School, Moulsari Gurugram approached me in December 2025 for doing a project in Chemistry at IIT Delhi. He was taken in for a two-week long training program, where he worked on a synthetic organic chemistry project involving **Photocatalyst-free Radical Tandem Cyclization/C-C Bond Formation of N-allylbromodifluoroacetamides with 2-Methylthiolatd Alkynones to Access substituted Thiochromones.** The work was challenging, but Aadvwaya displayed a keen interest and dedication while working on the experiments. He worked diligently and quickly learnt most of the practical skills like handling and weighing chemicals, setting up reactions, work-up, TLC, and column chromatography. During the entire program, Aadvwaya displayed a lot of discipline, patience and sincerity towards the assigned tasks. He showed extreme dexterity and caution in dealing with the equipment. I found him to have a good scientific temperament; and his desire to learn was evident from every minute details he would observe and analyze. Aadvwaya is a team player and demonstrated good interpersonal skills. I am confident that with these qualities, he would definitely be an asset in whichever field he chooses to pursue.

Sincerely,

Nidhi Jain
